

Cakewalk Delay Record (CWDR) (ver 1.1 Dec 15, 2022)

written by Glen McInnis

Please Visit www.ThyWordWeLove.Love

This program was written for the popular Cakewalk Daw, works only with the mouse and has no hot keys.

CWDR is a stand-alone program you can put on your desktop. It does not install into the Applications folder.

It stays on top of all windows including the Cakewalk Daw. You can use this in another DAW if it uses the same key strokes for record and pause.

Enter the number of seconds of delay before recording is to start and click on START. The PLAY button to the right will be disabled during countdown. To stop the countdown click on STOP.

The count down displays in the field of entry. When it reaches zero puts focus on the Cakewalk DAW and send the character "r". At the same time it provides PAUSE for the recording to the right of STOP.

To Stop the recording and rewind, click on STOP.

To Stop the recording and to NOT rewind, click on PAUSE. And recording stops and both the RECORD and PLAY buttons are reset.

When not recording, clicking on PLAY will send a space character to the DAW causing it to play, and the button changes to PAUSE. Clicking on PAUSE stops playback without being rewound. CLICKING on STOP stops playback and rewinds to where playback began.

I hope that you do enjoy and benefit from this program. Please visit my website often.

Thank You
Glen
